ANNEX A

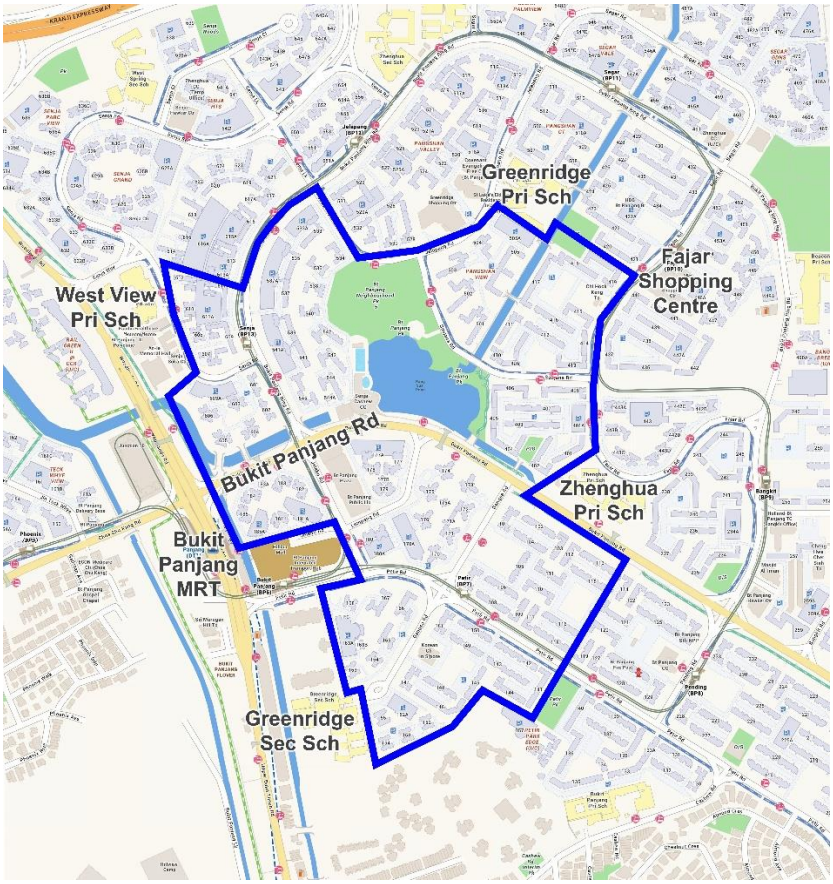
FIVE NEW SITES TO RECEIVE MALE *WOLBACHIA-AEDES* RELEASES PROGRESSIVELY FROM APRIL 2026 ONWARDS

1 Releases will be conducted twice a week in the morning at each site. Residents will be informed in advance through informational materials such as banners and posters displayed at residential lift lobbies or through letters. They may also refer to the NEA website for the release schedule.

2 The release number is carefully calibrated based on the local *Aedes aegypti* mosquito population. NEA's data shows that some areas could achieve good suppression of the urban *Aedes aegypti* mosquito population about 6 months following releases of male *Wolbachia-Aedes* mosquitoes. Releases may be reduced or stopped in areas where the urban *Aedes aegypti* mosquito population has been suppressed to dengue low-risk levels.

Location Maps of Expansion Sites

Bukit Panjang
Starting from 20 April 2026, release schedule: Monday and Thursday mornings
(subject to changes e.g., public holidays)



Little India
